How to connect two ue boom speakers with app

BOOM 3 packs a sonic punch for its size. Featuring Ultimate Ears unique audio processing, it produces clear and balanced audio faithful to the music you love, and at every volume level. In BOOM 3 we've perfected the iconic cylindrical design we pioneered to deliver immersive, stereophonic audio that radiates evenly in all directions. Unlike most portable speakers, BOOM 3 gives your music a deep, rich bass texture that's true to your music. Without exaggeration or distortion. Learn more about Ultimate Sound BOOM 3 is purpose built to handle life's thrills and spills. It's passed more than 25 seriously tough durability tests, including thousands of button pushes, 100s of tumbles, multiple drop tests, and more. So party on friend. From rooftop-raging to mountaintop-shredding BOOM 3's got ya back. With BOOM 3 you can play, pause and skip tracks directly on the speaker. Just push for convenient control of any streaming music. Or simply set up custom one-touch playlists for Spotify® on Android*, Amazon Music Unlimited, Amazon Prime Music, Apple Music and Deezer® Premium. Match the moment with the vibes without reaching for your phone. * Compatible with Android phones and tablets OS 6 and above BOOM 3 is covered in a two-tone fabric that's as tough as it is hot-damn beautiful. Engineered for applications like motorcycle jackets and fire equipment, this performance textile is built for extremes. And colored two ways by our custom dying process, it comes to life in a range of drop-worthy iridescent themes. BOOM 3 runs on the same battery technology as some of the most crave-worthy electric cars. BOOM 3 will stay powered and pumping tunes for 15 hours** on a single charge. BOOM 3 was born to get wet and is completely waterproof. Boasting an insane IP67 water and dustproof rating, it can be totally submerged in water for up to 30-minutes. When it pops back to the surface-because it floats too-it will still be booming loud and proud. Throw Power Up charging dock (sold separately) into your basket, so you can grab-and-go with BOOM 3, fully charged, to your next musical adventure. The BOOM & MEGABOOM app by Ultimate Ears has everything you need to get the most out of your Ultimate Ears speaker. From #PartyUp to customizable EQ, unlock even more awesome ways to use your BOOM, MEGABOOM and HYPERBOOM speakers. + Support Ultimate Ears HYPERBOOM. + #PartyUp lets you connect up to 150 speakers to take your parties to a whole new level - wherever, whenever, whatever!+ You Control the Sound: All about that bass? In a tight space? You control the atmosphere with our custom EQ settings. + Remote On/Off: you'd never walk all the way to your TV to turn it on and you shouldn't have to with your wireless speaker either. Use the app to turn your speaker on/off from afar. + Much more: personalize your speaker's name, EQ preferences, and preset playlists (BOOM 3, MEGABOOM 3 and HYPERBOOM only).+ Subscribe to updates so you never miss a thing. A simple tap in the app updates your speaker with the latest features in no time. Jul 20, 2021 Version 7.6.3 Bug fixes and enhancements I own 2 booms (one of the newer models) and the party up feature for the past 6 months has been glitchy. One of the two speakers often drops off and disconnects and is unable to reconnect without turning off both speakers, closing the app, turning Bluetooth off and back on on my phone etc. Both speakers are equidistant from my phone (just using as 2 channel stereo in a room within a 15ft radius so it's not a Bluetooth out of range signal issue). When I first got the speakers it was a different issue - one of the two speakers would frequently skip and have static. Suddenly it all worked great for maybe 3-4 months, and now it's the one of the two speakers drops off (it's not specifically one of my two speakers either, they both do it). Also happens on my wife's newer iPhone 11. It's too bad one cannot give negative stars! Everyone involved in developing this worthless drivle need to be given Pink Slips *E* escorted to the exit immediately. It is unfathomable that Logitech is associated with this nonsense. It is bad enough that there is no way to extinguish that obnoxious sound that it makes when turning on or off and no AUX jack/port on the UE Megaboom to connect directly but this is putting rock salt into a gunshot wound *f* stitching it closed. Also, it will no longer connect via bluetooth to my MacBook Pro. I tried to return the speaker but it was beyond the return date. [yea, I did the dance through the website] The software, once downloaded onto my iPhone, never shows the MegaBoom in the bluetooth window. This is worse than the KEF LSX attempt at a bluetooth app.Yes, my bluetooth function works because I writing this message with my Logitech K760 Solar Keyboard via bluetooth.RECOMMENDATION: Burn this disaster of an attempt at a bluetooth app. AND burn the draft boards it was written on. Stick to hardware *E* make sure it works. This should be considered an absolute embarrassment for a company such as this. Spend you money JBL if you want to connect via cable. Otherwise, if it is in the budget, get a pair of PSB, ELAC or Klipsch active speakers if you do not necessarily need portability. Cart before the horse here on execution. Audio quality and connection should be paramount over all of the other convenience features. It shouldn't be an iterative process to successfully get 3 speakers partied up and by no means should any have audio cutting out while sitting next to one another fully charged playing music (5G WiFi, downloaded tracks, whatever, there's a codec issue here).The app looks nice and all but at the end of the day all I'm looking for is a high quality stable connection between multiple speakers. If I need to physically get up and walk over to turn one on/off or adjust the volume so be it. EQ, nice to have but I'll trade it any day for rock solid audio with no cutouts. Requiring the app to party up may look cool with the dots and all, but fuctions 10x better and consistently on the cheaper wonderboom models (which sadly are limited to 2 max otherwise I'd just buy 6 of them).Ignore the completion from the likes of Bose, beats, JBL etc... you have some solid underlying physical engineering that the app doesn't do justice and even detracts from. Forget adding extra features and focus on the core product and main reason people buy your speakers, to listen to some dang music. The developer, Logitech Inc., indicates that the app's privacy practices may include handling of data as described below. For more information, see the developer's privacy policy. The following data may be collected but it is not linked to your identity: Identifiers Usage Data Diagnostics Privacy practices may vary, for example, based on the features you use or your age. Learn More Developer Website App Support Privacy Policy A portable speaker is a great way to enjoy your music at home or on-the-go, allowing you to wirelessly stream music from your smartphone, tablet, or laptop - and the best Bluetooth speakers of 2022 can even rival their wired brethren in terms of audio performance, connectivity, and ease-of-use.There are loads of portable Bluetooth speakers for you to choose from right now, and this can mean making the right buying decision is tricky - and that's where we come in.All of the products we've selected can be used as outdoor speakers, so you can take them with you to the park or a party. That's thanks to rugged designs and extra features like water resistance that protect these speakers from the elements - though some of the Bluetooth speakers in this guide are more robust than others. (If you are planning on paying a visit to a beach or pool, you may want to also check out our guide to the best waterproof speakers to ensure accidental slips or spills don't ruin your day.)Some of these speakers are also packed with handy extra features, including voice control, with virtual assistants like Alexa and Google Assistant built-in. This means your wireless speaker can double as a smart speaker, which can then be used to control your smart home devices. Or you simply ask it to play your music using voice commands.Smart speakers aren't for everyone, though, and most of the devices in this guide are simply designed to play your music. JBL makes a number of non-smart speakers - like the newly announced JBL Flip 6, which won't listen in on your conversations.As they're so versatile, some of the models in this list can also double up as computer speakers if you want to have a cleaner PC setup, too. Whenever you're planning on using your new speaker, you can be sure that all of the models in this list stand out because they perform well in three key areas: they're portable, durable and offer excellent audio whether you're listening inside or outside.We've tested the devices below extensively in a range of environments, which means you can be confident in picking the very best Bluetooth speaker for your needs and budget.Our top picksThe best Bluetooth speakers you can buy(Image credit: Sonos)The Sonos Roam is our pick for the best Bluetooth speaker on the planet, with a powerful sound, rugged design, excellent connectivity features, and smart home control. A bass-heavy audio performance makes it ideal for use outdoors, while a clever Automatic Switching feature means it's easily used indoors, too - though audiophiles may dislike the overwhelming low frequencies and rhythmic handling.Following in the footsteps of the Sonos Move, the Sonos Roam comes with both Bluetooth and Wi-Fi connectivity, which means it can work as a portable speaker as well as part of your wider multi-room Sonos system - and with Google Assistant and Alexa onboard, it doubles up a smart speaker too. In spite of its (relatively) low price you're getting a lot for your money here. Its slick design means the Sonos Roam won't look out of place in your home, while a rugged, waterproof and dustproof build and a decent battery life make it ideal for listening to your outdoors.Read more: Sonos Roam reviewUpdate: Sonos has just announced the brand new Sonos Roam SL. Much like the Sonos One its Sonos One SL counterpart, this new version of the Roam lacks a microphone but is otherwise identical in terms of specs. If you're concerned about privacy and want to save around \$20 / £20 / AU\$30 then the Roam SL could be exactly what you want. (Image credit: Sonos)Here's the thing about the Sonos Move - it's so good, you might want to consider it not only as your on-the-go party station, but also as your main in-the-home wireless speaker too.With two quality drivers, a solid app that unlocks playback from hundreds of wireless sources, multi-room capabilities and smart audio-tuning tech which tweaks the output based on the speaker's immediate surroundings, the Sonos Move is engineered to be well beyond your average Bluetooth speaker. It's a versatile speaker, one that stands solidly alongside the built-for-home Sonos speakers that the company made its name on.It's not perfect - it's not perfect - it's heavy as a byproduct of its incredible sound, it's expensive due to its rich feature set, and it sadly can't be used as rear channels for a home cinema set-up. But if you've got the money, it's hard to fault the Sonos Move when it comes to hunting down the very best Bluetooth speaker in the world.Read the full review: Sonos Move review(Image credit: Ultimate Ears)While we weren't as impressed with the UE Boom 3 as we were with its predecessor the UE Boom 2, this is still one of the best Bluetooth speakers money can buy in 2022. This is a speaker that can get loud and not distort at higher volumes; be light enough to carry on a camping trip but remain durable enough to tumble in a bag unprotected. It's both water and dust-proof, and now has a one-touch mix button that lets you pull up your favorite playlists without ever picking up your phone. There are certainly more detailed portable speakers out there, but at a price that's relatively affordable to all, the UE Boom 3 hits all the right notes for the third year in a row. Ultimate Ears now lets you customize your UE Boom 3, so you have even more options when it comes to color and pattern combinations.Read the full review: UE Boom 3 review(Image credit: JBL)The JBL Flip 6 is a prime example of a Bluetooth speaker that sticks to the basics, and gets it right. This rugged portable speaker is super simple to use, sounds good, and can be paired with up to 100 other JBL speakers at once to create a huge wall of sound. You won't find extra features like voice assistants or Wi-Fi connectivity, but the Flip 6 sounds so good that you won't miss them. Its warm, well-balanced audio performance is far more powerful than you might expect from a speaker of this size, and while trebles can sound a little harsh at higher volumes, you're getting plenty of clarity and detail. A 12-hour battery life and water and dust resistance makes this an ideal speaker to take to the pool or beach, and it's available in an array of eye-catching colors. It's a shame it doesn't have a port to charge your phone, but that's small concession. Like the JBL Flip 5 before it, the Flip 6 is an ideal speaker for anyone who wants to simply play their music, crank it up loud, sit back and enjoy - whether you're listening at home or on the go. Read the full review: JBL Flip review(Image credit: Bose)The Bose Portable Home Speaker was one of the first portable smart speakers we tested, offering the smarts of Google Assistant and Alexa alongside Bluetooth connectivity. While it launched a few years ago now, the Home Speaker is still one of the best portable speakers that can offer smart home control without being restricted to indoor use. Bose has a great reputation for building good-looking speakers, and this model is no exception: gorgeous minimalist design meets weather-ready robustness, with a light build and handle that lends itself to listening on the go. The brand is also well known for delivering excellent audio quality from its products, and the Home Speaker is a great example of this, with a warm, well-balanced soundstage and an assured command of complex tracks.It doesn't quite meet the sonic dexterity of the Sonos Move, or the value for money of the UE Boom 3 and JBL Charge 4 - but if you love that Bose sound and build quality, this is the portable speaker for you.Read the full review: Bose Portable Home Speaker review(Image credit: Soundcore)The Anker Soundcore Flare 2 is an excellent go anywhere, do anything Bluetooth speaker that'll appeal to anyone looking to introduce a little color into their surroundings. That's thanks to LED rings that encircle each end of the speaker, lighting up as you listen to your music. That splash of color makes the Soundcore Flare 2 an excellent choice if you're looking for a party speaker that's easy to chuck in a bag - though it's not as compact as the UE Wonderboom 2. The design isn't so garish that it'll look out of place in your home, and its rugged construction means the Soundcore Flare 2 can join you at the beach or poolside. As for the sound? The Soundcore Flare 2 delivers a well-balanced and tonally warm audio performance, and comes with a BassUp feature to boost the lower frequencies. However, the sound quality does suffer at higher volumes. Those wanting more bass but still want a party speaker with lights will want to check out the JBL Pulse 4, which gets louder, has more bass impact and a full-body lightshow but is over twice the price.Read more: Anker Soundcore Flare 2 review(Image credit: Ultimate Ears)The original UE Wonderboom topped our best waterproof speaker list for a long time - but it's since been usurped by the Wonderboom 2. Although the UE Wonderboom 2 looks nearly identical to the original, Ultimate Ears packed in a slew of improvements that make the Wonderboom 2 even better, like the increased battery life (up 30% compared to the original), better bass response, and the new Outdoor Boost feature that helps the speaker get even louder than before.The UE Wonderboom 2 is a fantastic rugged and waterproof speaker you'll actually want to take with. Its small size doesn't mean small sound, however, as the speaker gets extremely loud and sounds great - and it can be paired to other Wonderboom speakers to amplify your music even more. While it can't match the bass response of larger speakers like the UE Boom 3, the improved bass adds warmth and intensity to music that the original was lacking. All said, for \$100 / £90 / AU\$129, the UE Wonderboom 2 is still one of the best waterproof speakers you can buy - and our recommended option for those looking to bring their speaker to the beach or pool. Read the full review: UE Wonderboom 2 review(Image credit: JBL)Looking for a portable speaker that can charge your phone while it's blasting music? Check out the JBL Charge 5.In terms of features the JBL Charge 5 is relatively basic compared to something like the JBL Pulse 4 - which provides a customizable lightshow for users - but for this fifth generation JBL has incrementally improved sound quality and volume while still offering all-day battery life. Physical controls remain the same with slightly raised buttons on top of the speaker. There are buttons to control playback, volume, power, Bluetooth pairing, and "Party Boost" that turns the volume up to 11. Around the back, the JBL Charge 5 has a waterproof USB-C charging port as well as a flap hiding the USB-A port that can be used to charge up your smartphone. The Charge 5 drops support for the 3.5mm aux jack from the JBL Charge 4, which is a bummer for some who have legacy devices they want to hook up. Overall, the JBL Charge 5 sounds like a bigger portable speaker than it is. It dishes out an impressive amount of bass for its size without sacrificing on the mids or highs.Read the full review: JBL Charge 5 review(Image credit: Ultimate Ears)The Ultimate Ears Hyperboom is a powerful speaker that will deliver a party atmosphere, both indoors and outdoors. Its Ultimate Ears' largest Bluetooth speaker to date, but stays in keeping with the company's stylish and discreet designs, and adds two Bluetooth radios so you can switch seamlessly between two phones. Despite being party-centric (read: packing tons of bass), it also delivers a very well-balanced soundscape. Here you never get the feeling that you are playing bass to make a party at the expense of other elements in the music, and almost no matter what you put on music, you get a pleasant experience.In terms of features, the Ultimate Ears app allows you to connect the Hyperboom to other UE speakers and use them together, you can switch audio source and adjust volume, and you can select four different playlists in Amazon Music, Deezer or Spotify that can be started by holding down the Play button in three seconds.For parties small and large, this Bluetooth speaker box is a great pick.Read the full review: UE Hyperboom review(Image credit: Bose)The Bose SoundLink Flex might not be the best portable speaker you can buy overall, but it sure ticks a lot of boxes and this makes it a solid option if you're looking for a Bluetooth speaker for a range of different uses.With a light and compact build, the SoundLink Flex has around 12 hours of battery life, which is decent but not the best you'll find. Its sound performance is solid, too, with a bold, assertive, and punchy sound. The bass is powerful, and while the lower frequencies could do with a little finessing, that strong low-end is great for listening to music outdoors, where there are no walls for the sound to bounce off of. We like that there are several ways you can control your music, including with your voice, via an app or with onboard controls - though it's a shame there's no way to tweak the EQ levels. The Bose SoundLink Flex has plenty going for it, and that's before you take the cache and credibility of its brand logo into account, too. If it had a little more expressiveness to its low-end reproduction, or a little more discipline to its overall sound when you listen at significant volumes, it would be approaching 'no-brainer' status.Read the full review: Bose SoundLink Flex review(Image credit: Sony)The entry-level Sony SRS-XB23 is a rock-solid \$99 (around £80 / AU\$150) portable Bluetooth speaker that features an IP67 rating and a 12-hour battery life. Completely waterproof and dust resistant, this is an outdoor speaker that you can comfortably take to the beach or pool.In terms of audio performance, it can get pretty loud without a massive amount of distortion and the passive radiators help the bass to sound clearer than it has on any of Sony's previous models. That's because the XB23 uses Bluetooth 5 and supports three major codecs - SBC, AAC and LDAC, the latter of which you'll find on newer Android devices and sounds absolutely great. LDAC support means you can enjoy hi-res audio files from the likes of Tidal, so this is a great speaker for anyone who wants to eke out every last drop of detail from their favorite songs.Outdoor adventurers will love the ruggedness of this Sony Bluetooth speaker while us kick-back-and-relax folks will enjoy how snugly it fits into a lawn chair's cup holder. Read the full review: Sony SRS-XB23 reviewLooking for something a little bigger? Check out our Sony SRS-XB33 review, where we put the more powerful Bluetooth speaker to the test.(Image credit: Bang & Olufsen)Visually near imperceptible from the original A1, the Bang & Olufsen Beosound A1 (2nd Gen) is an appealing and highly portable Bluetooth speaker that comes with (admittedly flawed) Alexa support. The puck-shaped speaker looks sophisticated, while its IP67 water and dust resistance rating means its more robust than it looks, making it suitable for use outdoors.Its crisp audio performance and 360-degree soundstage makes the A1 ideal for soundtracking small gatherings, though it won't provide the room-filling sound that larger speakers are capable of.Bluetooth 5.1 connectivity means that the speaker is easy to pair with your smartphone, while built-in Alexa voice assistance means it can double up as a smart speaker. The A1 is the first speaker to offer Alexa support without needing to be connected to your home Wi-Fi network - and while this is impressive in itself, we did find that the voice assistant was sometimes quite slow to respond to our commands.Ultimately, we were impressed with the B&O Beosound A1. A marked improvement over its predecessor, there's better battery life, and waterproofing, although we're not so sure how much we'd like to take it outside the home. Read more: Bang & Olufsen Beosound A1 (2nd Gen) review(Image credit: TechRadar)UrbanistaThere are so many new Bluetooth speakers on the market these days that it can be tricky to figure out which one you need. However, there are plenty of specific features to look out for, even if it does feel like the choice is endless. The first thing to consider is where you want to use your new Bluetooth speaker. Loud and rich-sounding, it features two drivers on each side of the speaker to deliver a wide soundstage that feels more expansive than you might expect from a speaker of its size. Plus, you can pair two Urbanistas for true stereo sound.Battery life is solidly dependable thanks to the Urbanista Brisbane's 8000mAh capacity. Urbanista reckons it'll last for up to 10 hours of constant playback with a 90-day stand-by time. We didn't quite have the time to check if that 90 day figure was accurate, but the battery certainly lasts as long in use as Urbanista declared. It only takes a couple of hours to recharge too, which is certainly convenient.For the price, the Urbanista Brisbane is ultimately a bit of a bargain. You'll find better sound quality out there, but it'll cost you a lot more, and while it doesn't boast a 360-degree soundstage like some of the cylindrical speakers in this guide, the ability to stereo pair is a good way to boost the audio performance.All in all, this mid-range speaker could be a great choice for anyone who wants the freedom of wireless listening without sacrificing volume levels.Read the full review: Urbanista Brisbane review(Image credit: 1MORE)If you like the circular design of the Beosound A2 (2nd Gen) but don't like the high price, the 1More Portable BT Speaker is a great cheaper alternative. Like the brand's in-ear headphones, the Portable BT Speaker sounds excellent fr the price, with an impressive bass response at low volumes. At higher volumes, the trebles frequencies dominate, but they never sound overly harsh.The compact size of the Portable BT Speaker means it can easily double up as a speakerphone, which is handy if you need to dial into a meeting while on the move and don't want to rely on your headphones or your laptop's built-in speakers.While the battery life is rated at 12 hours, we found it came closer to 10 - which is still very good for a speaker of this size. An IPX4 water resistance rating means you do have some protection from spills and splashes, but we wouldn't recommend taking this speaker to the beach or the pool.Read more: 1MORE Portable BT Speaker reviewBluetooth speaker FAQsThere are so many new Bluetooth speakers on the market these days that it can be tricky to figure out which one you need. At higher volumes, the trebles frequencies dominate, but they never sound overly harsh.The compact size of the Portable BT Speaker means it can easily double up as a speakerphone, which is handy if you need to dial into a meeting while on the move and don't want to rely on your headphones or your laptop's built-in speakers.While the battery life is rated at 12 hours, we found it came closer to 10 - which is still very good for a speaker of this size. An IPX4 water resistance rating means you do have some protection from spills and splashes, but we wouldn't recommend taking this speaker to the beach or the pool.Read more: 1MORE Portable BT Speaker reviewBluetooth speaker FAQsThere are so many new Bluetooth speakers on the market these days that it can be tricky to figure out which one you need. However, there are plenty of specific features to look out for, even if it does feel like the choice is endless. The first thing to consider is where you want to use your new Bluetooth speaker. Loud and rich-sounding, it features two drivers on each side of the speaker to deliver a wide soundstage that feels more expansive than you might expect from a speaker of its size. Plus, you can pair two Urbanistas for true stereo sound.Battery life is solidly dependable thanks to the Urbanista Brisbane's 8000mAh capacity. Urbanista reckons it'll last for up to 10 hours of constant playback with a 90-day stand-by time. We didn't quite have the time to check if that 90 day figure was accurate, but the battery certainly lasts as long in use as Urbanista declared. It only takes a couple of hours to recharge too, which is certainly convenient.For the price, the Urbanista Brisbane is ultimately a bit of a bargain. You'll find better sound quality out there, but it'll cost you a lot more, and while it doesn't boast a 360-degree soundstage like some of the cylindrical speakers in this guide, the ability to stereo pair is a good way to boost the audio performance.All in all, this mid-range speaker could be a great choice for anyone who wants the freedom of wireless listening without sacrificing volume levels.Read the full review: Urbanista Brisbane review(Image credit: 1MORE)If you like the circular design of the Beosound A2 (2nd Gen) but don't like the high price, the 1More Portable BT Speaker is a great cheaper alternative. Like the brand's in-ear headphones, the Portable BT Speaker sounds excellent for the price, with an impressive bass response at low volumes. At higher volumes, the trebles frequencies dominate, but they never sound overly harsh.The compact size of the Portable BT Speaker means it can easily double up as a speakerphone, which is handy if you need to dial into a meeting while on the move and don't want to rely on your headphones or your laptop's built-in speakers.While the battery life is rated at 12 hours, we found it came closer to 10 - which is still very good for a speaker of this size.
